

First Sprint Goals

- Full HTML frames for every view
 - Full templating of main views
 - Template inheritance
 - Django forms for all forms
- Logging in (and auto-registering) via Twitter
 - Auto generate a TackdUser with Twitter information
 - Utilize the twython-django library for twitter OAuth
- Create new board (no privacy settings yet)
 - Allow users to create new boards which will at first be completely public
 - Each board has an associated creator, title, and photo
 - Photo uploads for board photos
- Initial implementation of creating new tacks
 - Create an initial implementation of the metadata parser
 - Utilize BeautifulSoup4
 - Grab the largest image on the host
 - Grab title, and meta tag information to be included in Tack post
 - Template for initial tack view
 - design for tack.
